

DRONESED – Drone based water quality monitoring

De Keukelaere, L., Raymaekers, D., Knaeps, S. Strackx, S., Verstappen, T. Decrop, B., Bollen, M.

DRONES - KNOWN CHALLENGES

1. Camera - Radiometry

VS

APEX hyperspectral

Sony Nex RGB

2. Camera - Geometry

VS

3. Illumination conditions

VS

4. Dynamic environment

Port of Zeebrugge, Belgium 17/09/2014

Scheldt river, Belgium 25/09/2015

Breskens, The Netherlands 15/07/2016 & 15/12/2016

FIELD CAMPAIGN – BRESKENS, SCHELDT RIVER (NL)

15/07/2016

15/12/2016

FIELD CAMPAIGN – SET-UP

DRONE- team

- Take-off and landing of drone
- Triggering camera and GPS
- See what drone was ‘seeing’

In-situ team

- Take TSM samples during drone overpass
- Write down location and time

DRONE TEAM

Drone

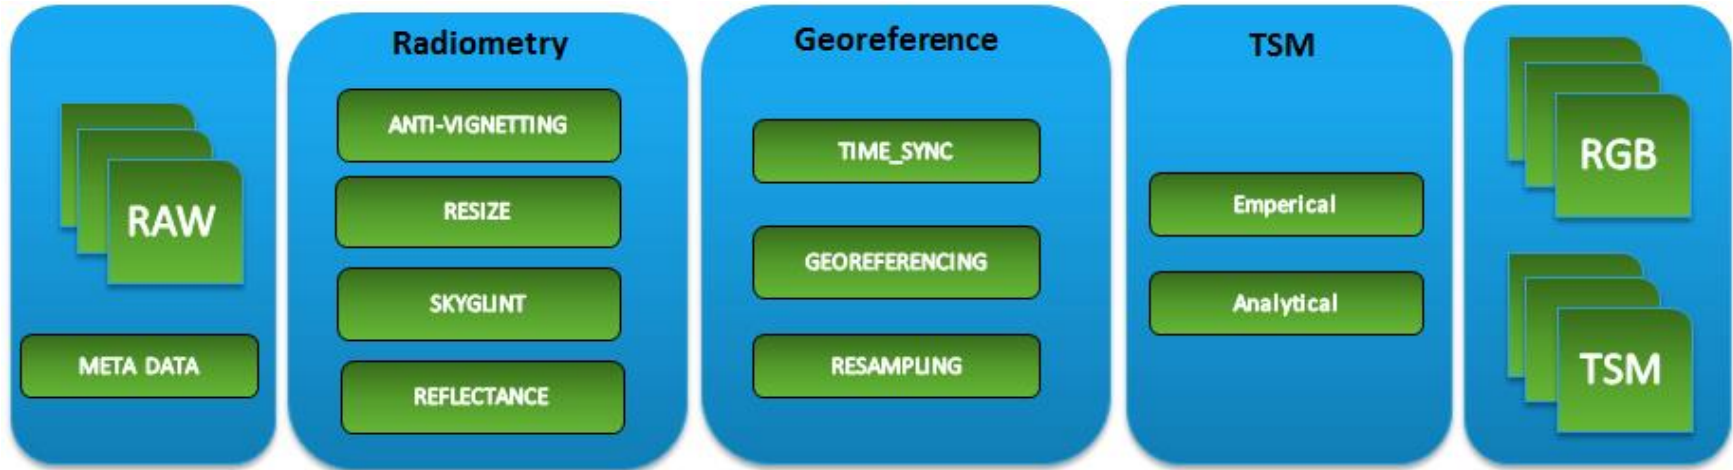

- Altura Zenith
- Camera: Sony Nex 6
- GPS/IMU system
- Raspberry-pi

Base station

- AIS information on vessels
- Footprint of camera view
- Settings of camera
- Location of drone

IMAGE PROCESSING

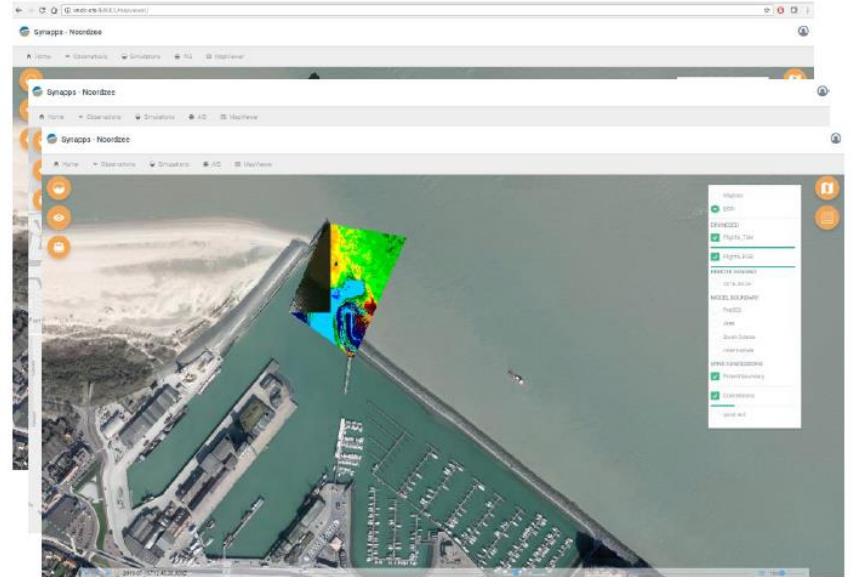

GET DATA TO THE END-USER

IMDC's operational support system 'SYNAPPS'

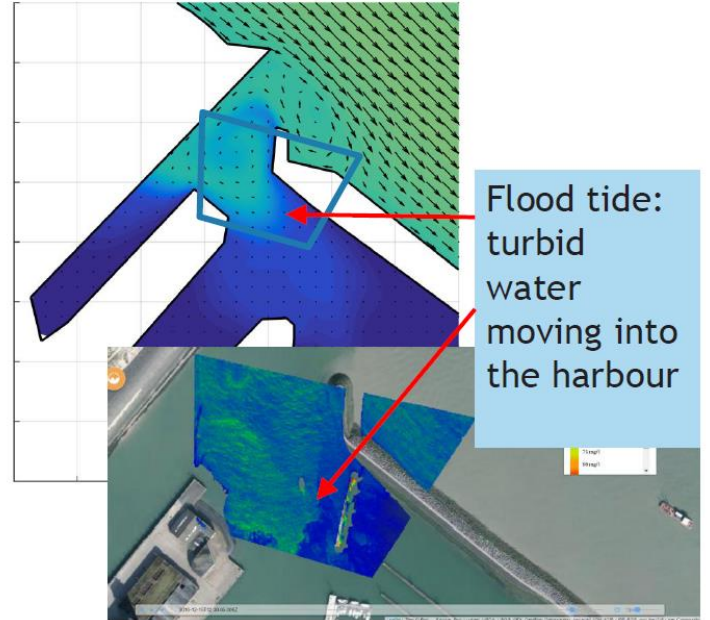

- Web-based
- Modular
- RS layers
- Real-time hydro measurement data
- Numerical model results
- Project-specific outline
- Visual data analysis

SEDIMENT MODELLING

- Sediment plumes moving in at flood tide
- Comparison between tidal flow model + sediment transport model
- Drone image:
 - Gives insight in spatial pattern
 - Calibration/Validation of model

vito
remote sensing

Data sources

UAV

Satellite

Processing

Sediment maps

UAV

Satellite

Sediment Modelling

SDI

Decision support

Data analysis

VALIDATION/MONITORING DREDGING PLUMES

Validation of:

- Computational Fluid Dynamics model
- Mid-field plumes in tidal model (order 500m from dredges)
