

U-TURN

Understanding
turning points in
dryland ecosystem
functioning

Paulo Bernardino *et al.*
November 13th 2018, Belgium

Outline

1st PHASE

PROJECT OVERVIEW

RESULTS

WHY?

- Earth's surface
- Global NPP

- Population

WHY?

- Earth's surface
- Global NPP

- Population

Project Overview

RQ 1: What is the overall importance of turning points in ecosystem functioning?

Phase 1

Phase 2

Project Overview

RQ 1: What is the overall importance of turning points in ecosystem functioning?

RQ 2: Which are the driving forces of turning points?

Phase 1

Phase 2

Project Overview

RQ 1: What is the overall importance of turning points in ecosystem functioning?

RQ 2: Which are the driving forces of turning points?

RQ 3: Can combined EO-DVMs analysis provide relevant information for early warnings of TPs?

Phase 1

Phase 2

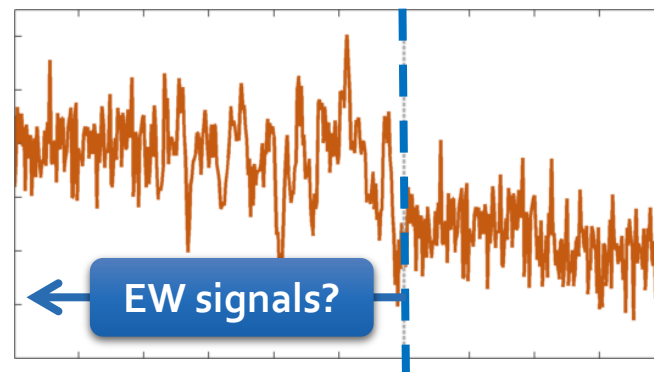

Project Overview

RQ 1: What is the overall importance of turning points in ecosystem functioning?

RQ 2: Which are the driving forces of turning points?

RQ 3: Can combined EO-DVMs analysis provide relevant information for early warnings of TPs?

Phase 1

Phase 2

1st PHASE

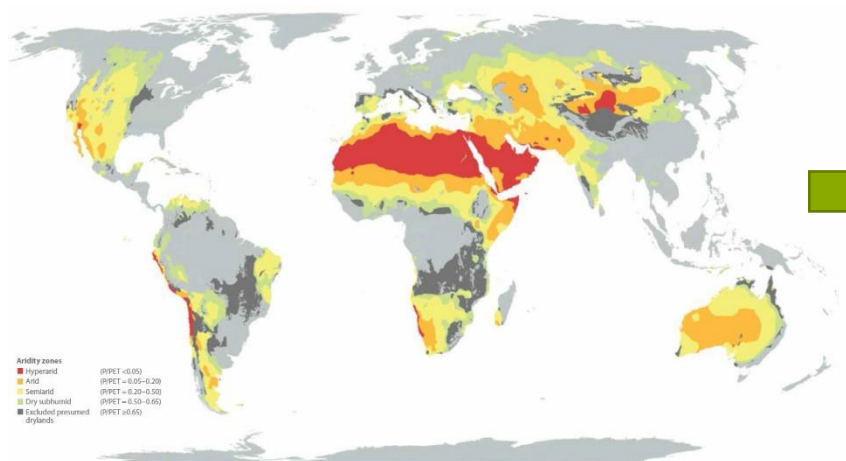

PROJECT OVERVIEW

WHAT?

Turning Points

HOW?

- Temporal changes in Rain-Use Efficiency (RUE)

$$\text{RUE} = \frac{\text{Tree}}{\text{Rain}}$$

HOW?

- Temporal changes in Rain-Use Efficiency (RUE)

NDVI in drylands \neq ecosystem functioning

HOW?

- Temporal changes in Rain-Use Efficiency (RUE)

- key EO proxy for studying:
 - (1) ecosystem functioning
 - (2) resilience
 - (3) land degradation

HOW?

- Temporal changes in Rain-Use Efficiency (RUE)

Significant change in ecosystem response to precipitation

Hotspots of altered ecosystem functioning (EF)

Turning points in EF

DATA?

Long-term
time series

Accurate assessment of
turning points in EF

GIMMS3g v1 NDVI

~ 8 km

CHIRPS

Time

METHOD

- Time series segmentation technique (BFAST)
 - gradual and abrupt changes in RUE
- BFAST₀₁ -> major break + classification of changes

METHOD

New Typology

Type

Subtype

Non-monotonic decrease

Accelerating

Non-monotonic increase

Slowing down

Reversal: increase to decrease

Transition

Reversal: decrease to increase

Complete

Time

1st PHASE

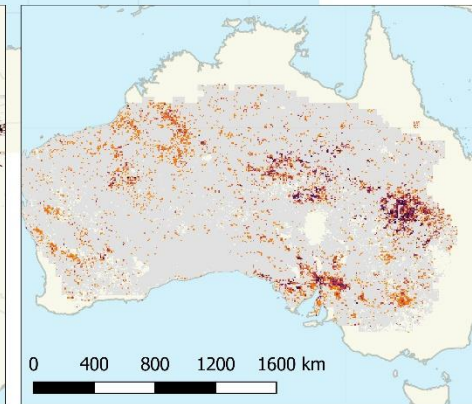

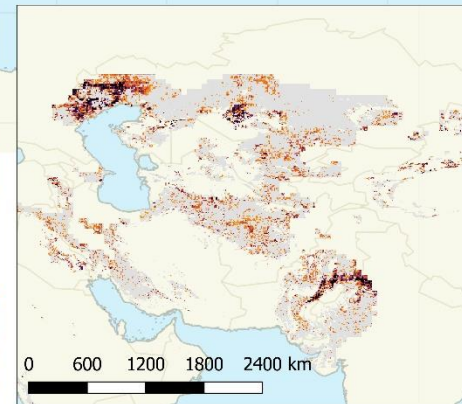

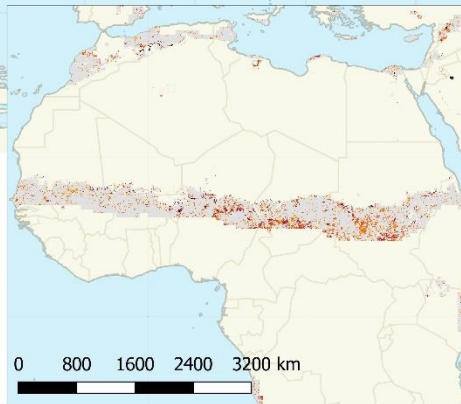

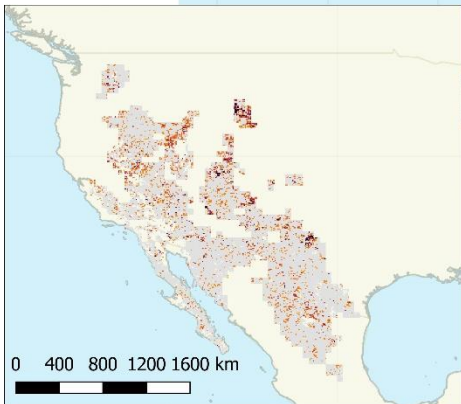

PROJECT OVERVIEW

RESULTS

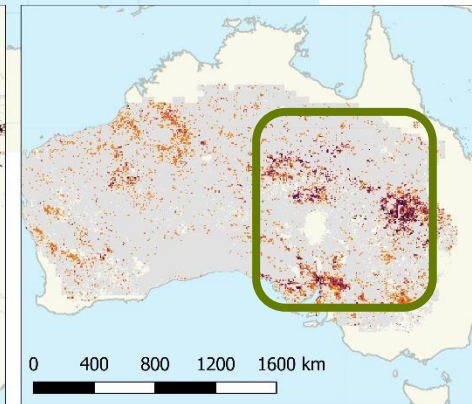

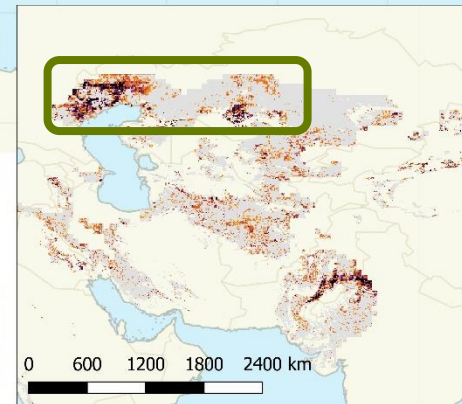

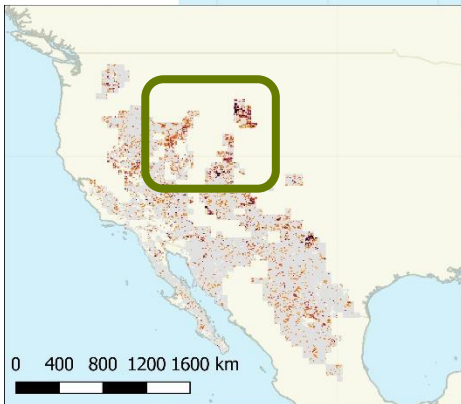

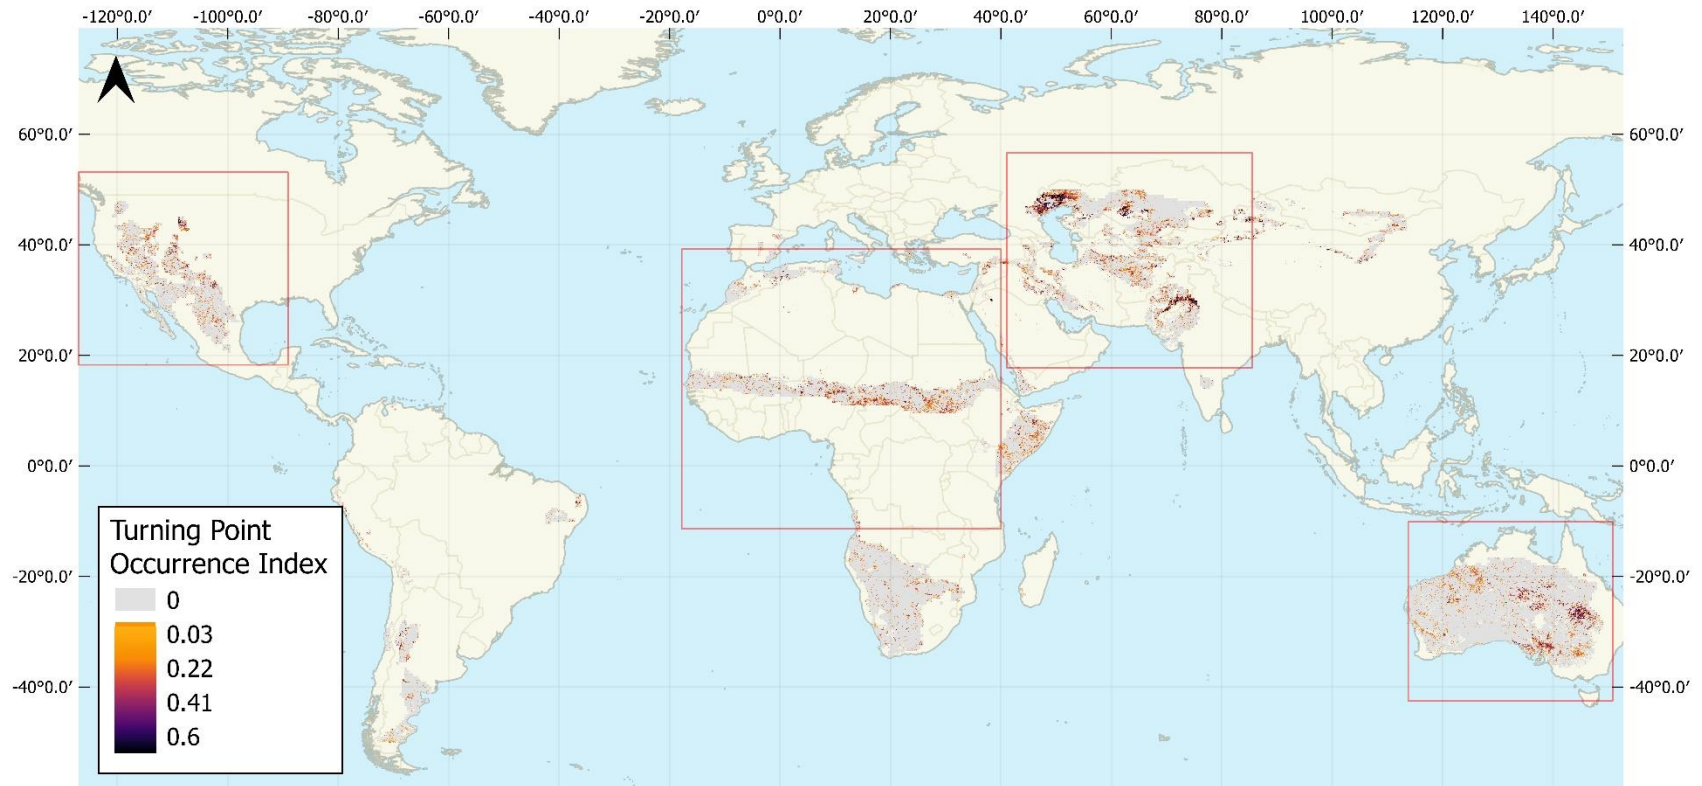

Results

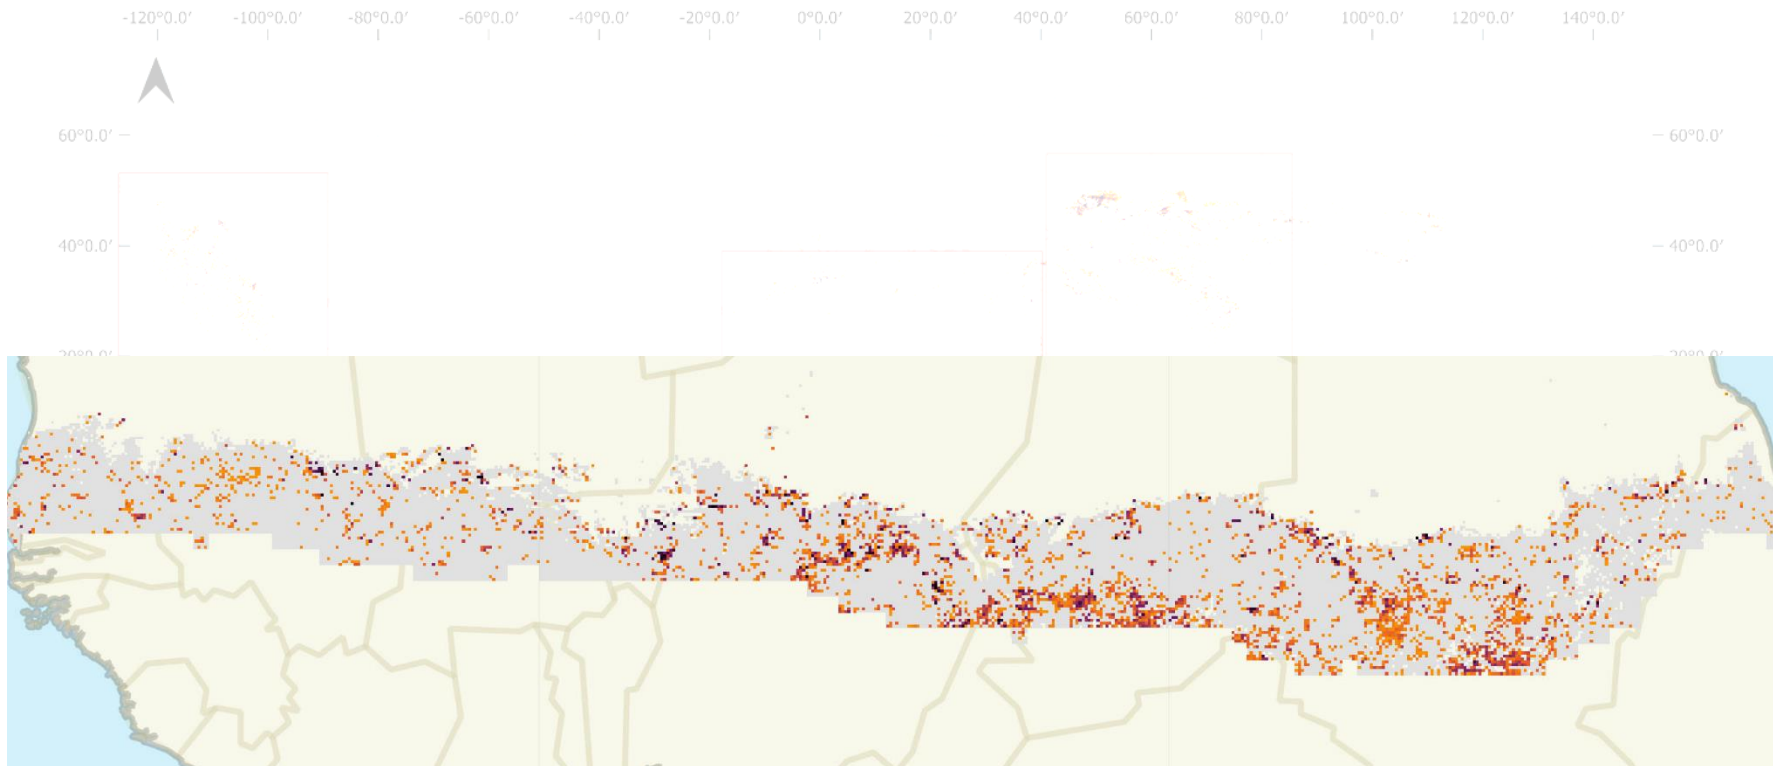

Results

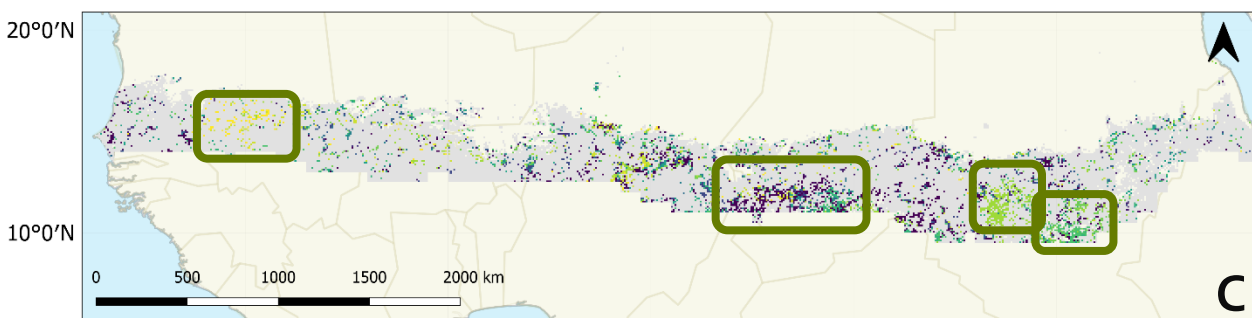

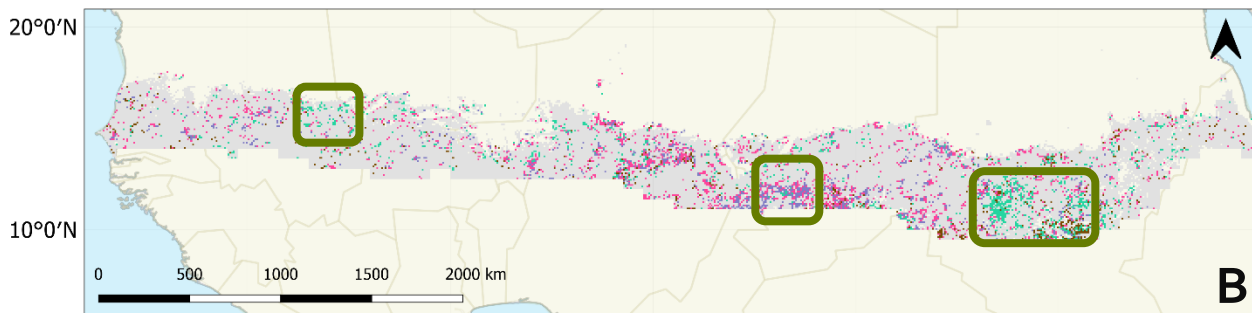

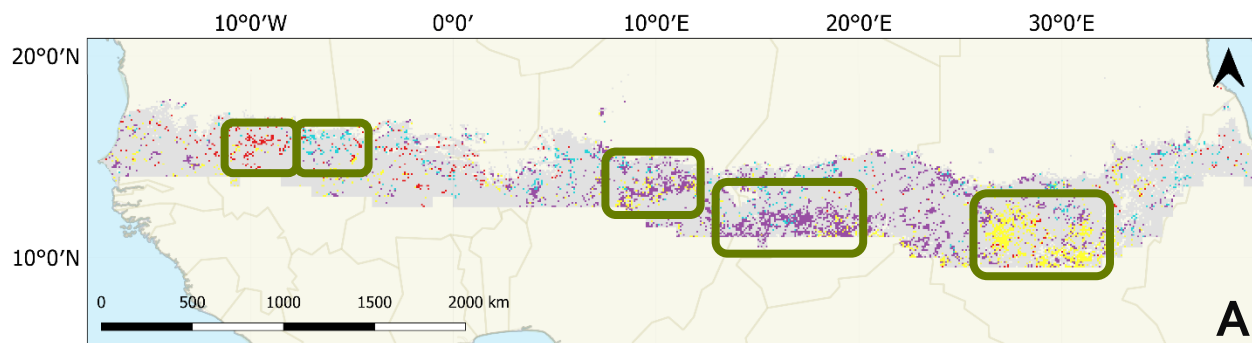

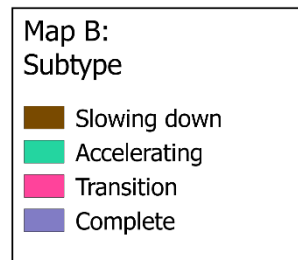

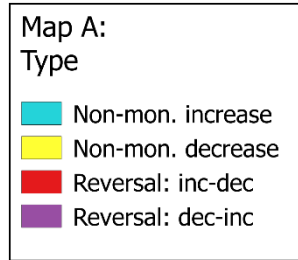

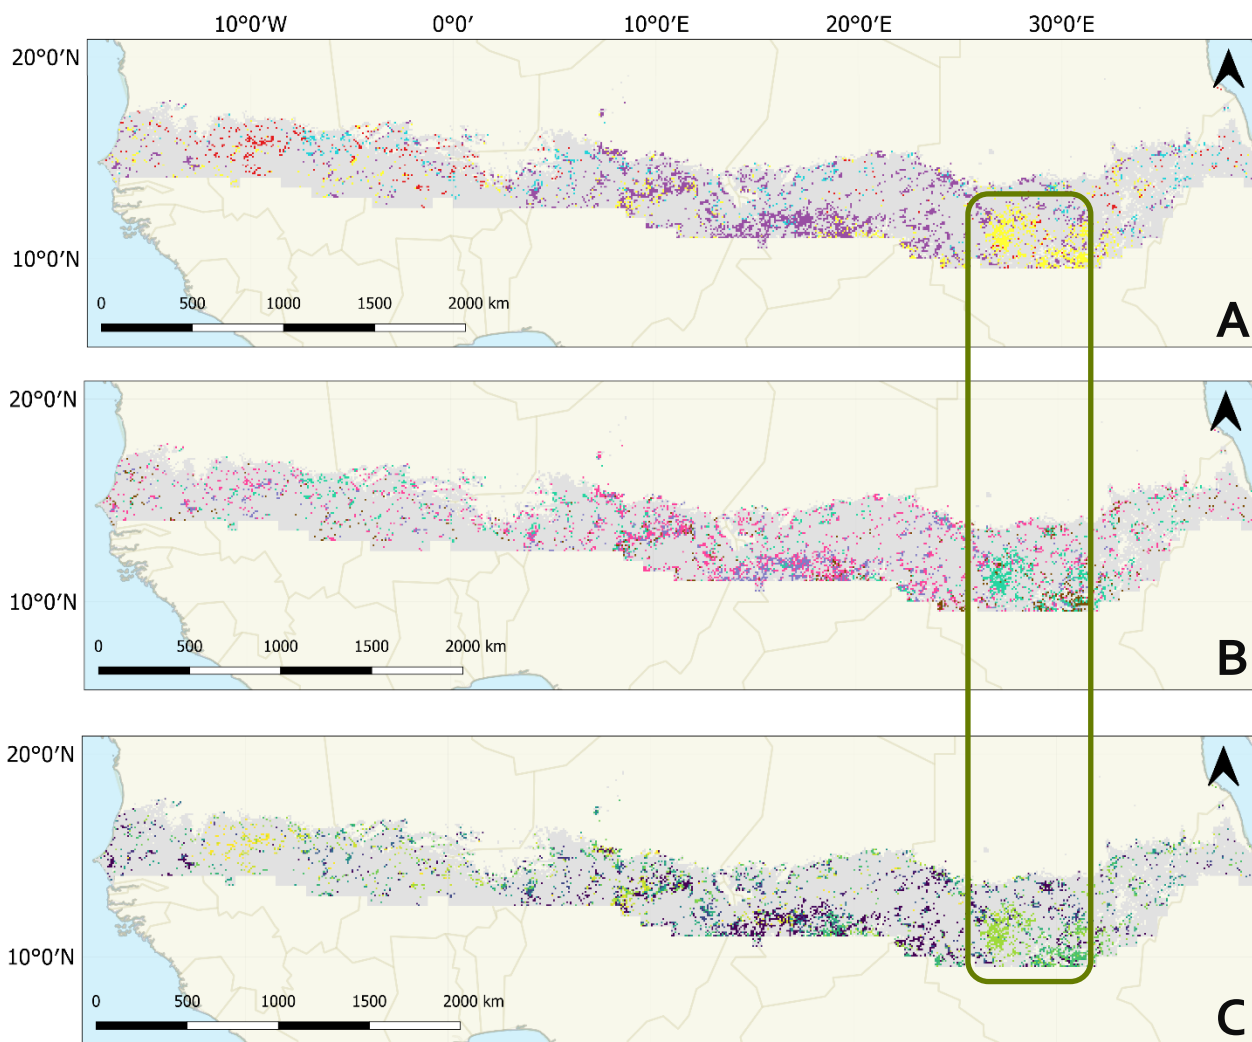

Results

❖ Large scale turning point events

Case study:

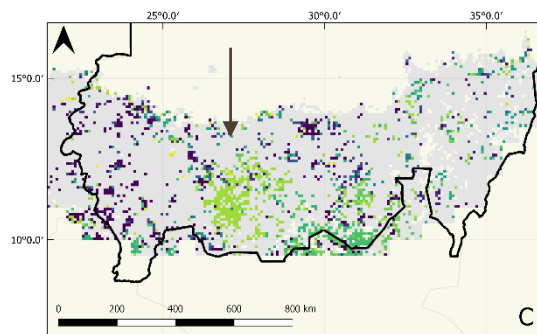

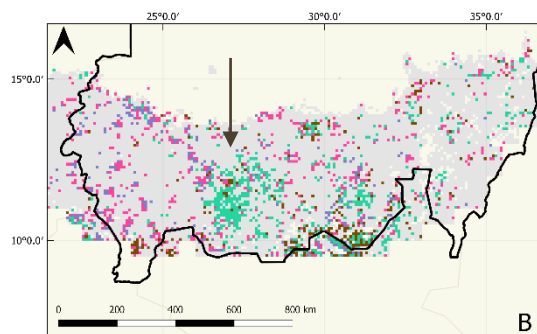

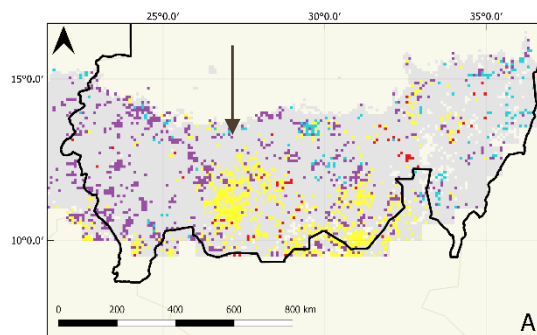

- Sudan (south)
- Accelerated degradation

Case study:

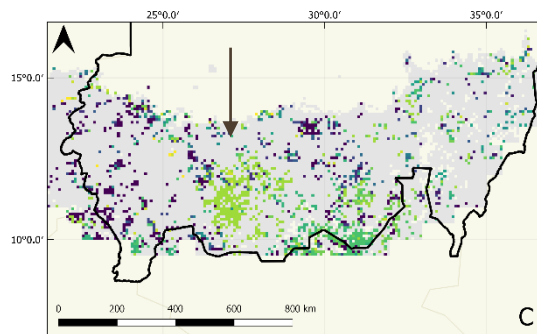

- Sudan (south)
- Accelerated degradation
- 2004

Case study:

- Sudan (south)
- Accelerated degradation
- 2004
- Driest year of the decade

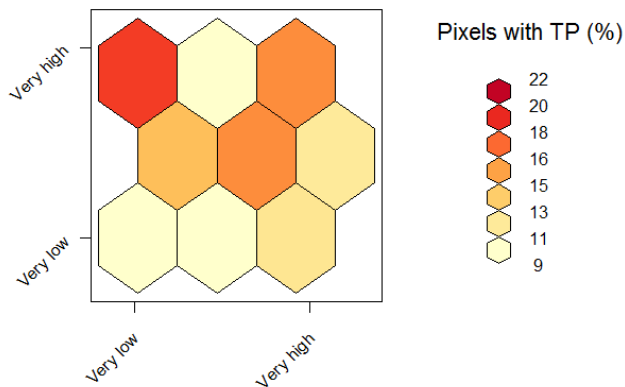

First insight on drivers:

Drought occurrence

North America

Sahel

Asia

D

Australia

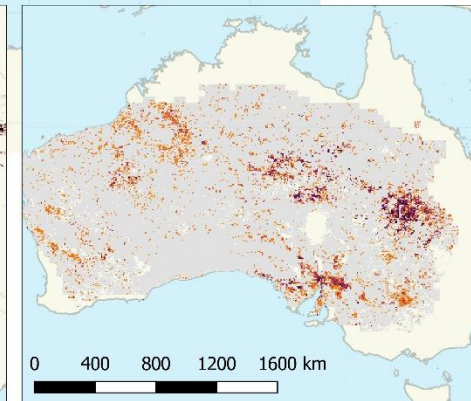

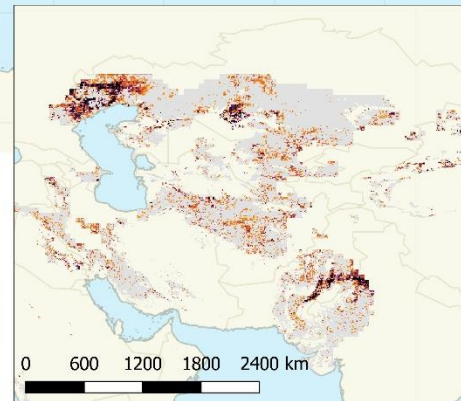

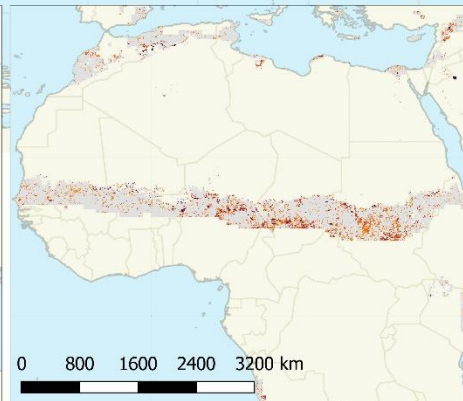

Population density

Final remarks:

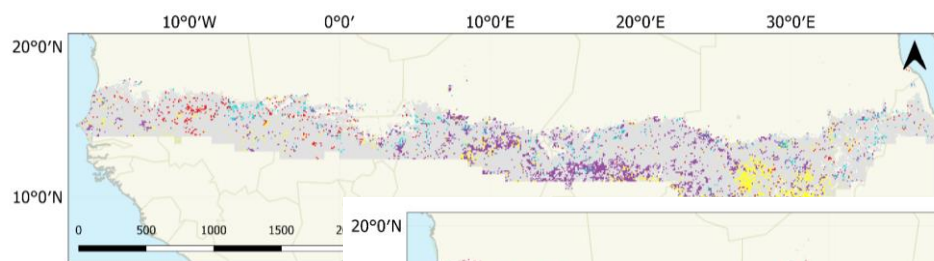

- Hotspots: central-western North America, eastern Sahel, north-western Central Asia and eastern Australia.

Final remarks:

- Hotspots: central-western North America, eastern Sahel, north-western Central Asia and eastern Australia.
- New typology: detailed characterization of detected changes in ecosystem functioning + year of TP occurrence.

Final remarks:

- Hotspots: central-western North America, eastern Sahel, north-western Central Asia and eastern Australia.
- New typology: detailed characterization of detected changes in ecosystem functioning + year of TP occurrence.
- Large-scale mapping: high interest for decision making; help to set priorities for ecosystem conservation measures.

Final remarks:

- Phase 2: already up and running!
 - drivers of turning points
 - early warning indicators

A solid green rectangular background. In the upper half, there is a large, stylized graphic of a U-turn arrow. The arrow is composed of a thick, dark green curved line that starts on the left, curves downwards and then upwards to the right, ending in a simple arrowhead. Below the arrow, the text "U-TURN" is written in a white, bold, sans-serif font. Further down, the text "THANK YOU" is written in the same white, bold, sans-serif font.
